Simplify Safety and Security

With combination intrusion and fire alarm systems

Helping you protect life and property is our goal.

Bosch G Series panels offer combination intrusion and fire solutions. With one system to learn, use and maintain, you get complete safety and security for your business. Plus, a single system lowers installation and maintenance costs, which reduces your total cost of ownership.

The Bosch Advantage

▶ **Reliability you can count on.** Bosch products are manufactured to meet UL requirements for safety and reliability. Our G Series panels are commercial fire approved to UL864 (U.S.) and ULC–S559 (Canada).

▶ **Evacuate people to safety quickly.** With a Bosch combination security and fire system, you can unlock doors anytime your system annunciates an alarm. Supplemental audio announcements can also be initiated to direct people to safety. This creates a safer environment for your employees and customers.

▶ **Combination keypads for intuitive use.** Users can control both the security system and fire system from a single combination keypad. No additional training is required. Plus, Bosch keypads offer a bilingual user interface with multiple language support.

▶ **Know what's happening at your facility even when you're away.** Receive notifications of important system events such as alarms via email or text messages directly to any smart phone.

▶ **Low cost of ownership with a single system.** With one system to learn, use and maintain, you can realize significant installation savings and maintenance costs.

▶ **Three flexible alarm communications options.** To protect your investment and ensure continuous operations, choose from onboard IP Ethernet technology, future-proof cellular plug-in modules, or a dedicated phone line (PSTN) for communicating with your alarm monitoring station.

G Series panels also integrate seamlessly with access control, IP video cameras, and building automation for a complete safety and security solution.

Keep people safe with a quality system you can rely on.

In addition to combination systems, Bosch offers fully-dedicated commercial fire systems for applications or jurisdictions where they are required. Our fully code-compliant systems can also include integrated carbon monoxide (CO) monitoring and sprinkler monitoring.

Bosch delivers a broad portfolio of products and systems for accurate, reliable fire detection and notification, while saving you time and money.
