## Flexible, cost-effective security for large premises.

Office buildings, department stores, industrial plants and other large facilities pose security challenges of a greater magnitude. It takes a special system to meet them without driving investment or operating costs sky-high. The intrusion control panel DS7400Xi from Bosch is the frontrunner when it comes to security systems, offering a full range of crucial benefits in terms of costs, flexibility and expandability.

### Scalable to your needs.

The DS7400Xi is a powerful intrusion control system you can flexibly expand to meet your needs. You can implement up to 248 alarm zones, making it ideal for large buildings and compounds. Each zone can be configured for protection against fire or intrusion. Nor is that

all: there are seven different authority levels, eight programmable partitions, and 200 different users are definable. There are 79 programmable outputs at your disposal to provide a basic interface to other control systems, including gates, air-conditioning units, and lighting installations. It's simple and straight-forward to link the DS7400Xi into an existing computer network – there's no need to build another one.

### Simple installation to cut costs.

The use of multiplex systems reduces installation costs. Multiplexing lets you connect a wide range of addressable detector devices directly to the control panel via a bus system, so you need fewer cables and distributors. This translates into less installation work, and also permits the use of less expensive types of cables.

 Intrusion Control Panel DS7400Xi

### DS7400Xi – The Features

Zones	8-248
Wireless Zones	up to 112
Partitions	8
Users	200
Authority Levels	7
Outputs	3-79
Keypads	up to 15
Door Access Modules	up to 8

## The answer to even the most demanding security requirements: the Intrusion Control Panel DS7400Xi.

The functionality of the DS7400Xi is impressive. Alarms can be remotely verified by sight and sound via video and audio links, which permits easy identification of false alarms and avoids the cost of unnecessarily alerting the police. And verifying genuine alarms is just as easy. There's also a door access module that only admits authorized persons, keeping everything safe – day and night.

### **Easy to operate.**

The intrusion control panel DS7400Xi is operated just like the other DS7000 Line panels, so you don't waste any time learning new skills. Train just once to gain competence with all the panels and software. Programming can be done locally (using the keypad or via RS232) or remotely (via PSTN or Ethernet), which greatly facilitates maintenance and troubleshooting. Activated elements are displayed in plain language for rapid localization and simple troubleshooting

without the need for complex diagnostics. All panels include an integrated dialer for alarm transmission.

### **Wireless solutions for greater cost-effectiveness.**

A large range of wireless detectors is available from Bosch. Used together with a wireless receiver, they eliminate cabling and all the associated costs and problems. The savings add up even faster when protecting a big area such as a warehouse. Installation is also quick and easy, being practically plug-and-play. Up to 112 wireless alarm zones can be set up.

### **An Unbeatable Combination.**

The DS7400Xi offers you the ideal combination of cost-effectiveness, flexibility, ease of use, and reliability for safeguarding large facilities. Now you can enhance your security while spending less time and money.
