

DS6MX Series Six-zone Control Panels

www.boschsecurity.com

BOSCH
Invented for life

- ▶ Six zones and a separate key-switch input
- ▶ Four user codes, a duress code, and an unlock door code
- ▶ Quick Arm function
- ▶ Supports up to six wireless RF detectors/sensors
- ▶ Built-in piezo buzzer

The DS6MX is a compact six-zone keypad and control panel in one package. It can be used as a stand-alone alarm system or connected to a DS7400Xi Control Panel for integrating individual apartment housing units into a large building monitoring system.

Notice

Use with DS7400Xi requires DS7400Xi-CHI with ROM version 4.05 or later.

The DS6MX has six alarm input zones, one alarm relay output, two solid state outputs and a key-switch input. One master code, three user PIN codes, one duress code and one door unlock code are available on the unit.

The DS6MX also supports the use of RF3332, RF3332E, RF3334, and RF3334E wireless key fobs for arming and disarming the panel (requires the use of a RF3212 or RF3212E receiver).

Functions

6 Zones and a Separate Key-Switch Input

All six zones can be programmed to be Instant, Delay, 24-hr or Follower. In addition, Zone 6 can be programmed to a Request-to-exit (REX) function for unlocking a door with its input connected to a

momentary push button or to a REX sensor such as the DS150i. This input then activates an output to either the relay output or Solid-state Output #2 to unlock the door for a preset time.

The key-switch input can be programmed to respond to either a momentarily or continuously closed key switch. When used in combination with the hardwired Instant Input mode, this allows instant arming/disarming of the system by simply turning a key.

4 User Codes, a Duress Code, and an Unlock Door Code

One master code is preprogrammed for programming or arming/disarming the system. Three user codes can be programmed for arming/disarming the system. One duress code is preprogrammed to disarm the DS6MX and send a silent alarm to the DS7400Xi panel. One unlock code is provided to allow the user to unlock a door.

Quick Arm Function

Programmed at time of installation, this feature allows single button arming without the need for a user code by holding the ON button down for 3 seconds.

RF Detectors/Sensors

The DS6MX can support one RF3212 or RF3212E receiver. The receiver can be remotely mounted up to 20 m (65 ft.) from the DS6MX. The wireless interface will allow up to six RF sensor/devices (PIR, PIR/microwave, door contacts, and smoke detectors) to be connected to the system and assigned to a zone function type.

Built-in Piezo Buzzer

The piezo buzzer (with a frequency of 3300 Hz) provides a keypad entry sound (beep sound), exit/entry sound (beep for length of programmed time), alarm sound (constant tone), panic sound (beep will repeat every 2.5 seconds), and trouble sound (beep once a second).

Built-in Tamper Switch

The built-in tamper will notify the control panel if the enclosure cover is removed or if the unit is removed from the mounting wall if the enclosure is mounted per the installation instructions.

Fire Reset Function

Resets smoke detectors for 4 seconds after an alarm with Solid-state Output #2.

Installation/configuration notes**Use on DS7400Xi Multiplex Bus**

When connected to a DS7430 MUX Module on the DS7400Xi panel's multiplex bus the maximum number of DS6MX panels is 60.

When connected to a DS7436 MUX Module on the DS7400Xi panel's multiplex bus the maximum number of DS6MX panels is 120 (60 per bus).

Power Requirements

DS6MX devices require a 12 VDC power supply and cannot be powered from the DS7400Xi panel. If more than one power supply is used, the negative (-) terminals of the power supplies must be connected together.

**Notice**

Auxiliary 12 VDC power supply(s) must not be connected to the DS7430 or DS7436 MUX Modules because damage to the equipment may occur.

The current draw on the power supply(s) depends on the number of DS6MX panels, the number outputs, and the type of outputs. To calculate the current required for the 12 VDC power supply(s), use the following formula:

$$(\text{Number of DS6MX Panels} \times 100 \text{ mA}) + (\text{Number of PO1 outputs used} \times 250 \text{ mA}) + (\text{Number of PO2 outputs used} \times 250 \text{ mA}) = \text{Total mA.}$$

Example: You have six DS6MX Panels. Three will use both the PO1 and PO2 outputs. Three will use the PO1 output only.

$$(6 \times 100 \text{ mA}) + (6 \times 250 \text{ mA}) + (3 \times 250 \text{ mA}) = 2850 \text{ mA} = 2.85 \text{ A.}$$

In this example you should use a 3 A power supply.

Technical specifications**Enclosure Design**

Color:	Frost white
Indicators:	6 zone LEDs, 2 status LEDs
Material:	2-piece ABS molded plastic with Lexan® graphics
Dimensions:	11.8 cm x 12.4 cm x 3 cm (4.7 in. x 4.9 in. x 1.2 in.)
Weight:	0.5 kg (1 lb.)

Environmental Considerations

Relative Humidity:	0% to 85% non-condensing
Temperature (Operating):	-20°C to +50°C (-4°F to +122°F)

Outputs

Alarm Relay:	Form C contacts rated at 3 A at 28 VDC or 120 VAC
Solid-State:	2 DC current sinks; 250 mA maximum per output at 0.1 VDC saturation.

Power Requirements

Current Draw:	30 mA standby, 70 mA alarm; 100 mA max (using programmable outputs adds up to an additional 500 mA).
Voltage (Input):	8.5 VDC to 15 VDC

Zone Characteristics

EOL Resistors:	10 kΩ
Response Time:	500 ms

Trademarks

Lexan® is either a trademark or registered trademark of General Electric Company in the United States and other countries.

Ordering information**DS6MX Control Panel**

Provides six zones and a separate key-switch input. The keypad text is in English. Order number **DS6MX**

DS6MX-CHI Control Panel

Provides six zones and a separate key-switch input. The keypad text is in Chinese. Order number **DS6MX-CHI**
