1 Safety

1.1 About this Manual

This manual has been compiled with great care and the information it contains has been thoroughly verified. The text was complete and correct at the time of printing. Because of the ongoing development of products, the content of the manual may change without notice. Bosch Security Systems accepts no liability for damage resulting directly or indirectly from faults, incompleteness, or discrepancies between the manual and the product described.

1.2 Legal Information

Copyright

This manual is the intellectual property of Bosch Security Systems, and is protected by copyright. All rights reserved.

Trademarks

All hardware and software product names used in this document are likely to be registered trademarks and must be treated accordingly.

1.3 Safety Precautions

In this manual, the following symbols and notations are used to draw attention to special situations:

**Danger!**

High risk: This symbol indicates an imminently hazardous situation such as “Dangerous Voltage” inside the product. If not avoided, this will result in an electrical shock, serious bodily injury, or death.

**Warning!**

Medium risk: Indicates a potentially hazardous situation. If not avoided, this may result in minor or moderate injury.

**Caution!**

Low risk: Indicates a potentially hazardous situation. If not avoided, this may result in property damage or risk of damage to the unit.

**Notice!**

This symbol indicates information or a company policy that relates directly or indirectly to the safety of personnel or protection of property.

1.4 Important Safety Instructions

Read, follow, and retain all of the following safety instructions. Heed all warnings on the unit and in the operating instructions before operation.

Caution!

TO REDUCE THE RISK OF ELECTRIC SHOCK, DISCONNECT THE POWER SOURCE WHILE INSTALLING THE DEVICE.

Caution!

Installation must be made by qualified personnel and conform to ANSI/NFPA 70 (the National Electrical Code® (NEC)), Canadian Electrical Code, Part I (also called CE Code or CSA C22.1), and all applicable local codes. Bosch Security Systems accepts no liability for any damages or losses caused by incorrect or improper installation.

Warning!

INSTALL EXTERNAL INTERCONNECTING CABLES IN ACCORDANCE TO NEC, ANSI/NFPA70 (FOR US APPLICATION) AND CANADIAN ELECTRICAL CODE, PART I, CSA C22.1 (FOR CAN APPLICATION) AND IN ACCORDANCE TO LOCAL COUNTRY CODES FOR ALL OTHER COUNTRIES. BRANCH CIRCUIT PROTECTION INCORPORATING A 20 A, 2-POLE LISTED CIRCUIT BREAKER OR BRANCH RATED FUSES ARE REQUIRED AS PART OF THE BUILDING INSTALLATION. A READILY ACCESSIBLE 2-POLE DISCONNECT DEVICE WITH A CONTACT SEPARATION OF AT LEAST 3 mm MUST BE INCORPORATED.

Warning!

ROUTING OF EXTERNAL WIRING MUST BE DONE THROUGH A PERMANENTLY EARTHED METAL CONDUIT.

Warning!

THE CAMERA MUST BE MOUNTED DIRECTLY AND PERMANENTLY TO A NON-COMBUSTIBLE SURFACE.

Warning!

Risk of bodily injury

Do not put a canted (45°) camera in an upright position on the camera base or on an unsecured DCA. In this position, the camera can fall over and can cause injury or be damaged. Put the canted camera on its side until installation.

- Do not open the camera unit. Doing so will invalidate the warranty.
- Use common-sense safety precautions, especially in situations where there could be risk of injury if any part of the assembly becomes detached and falls. Bosch recommends using the hinged DCA, which allows installers to “hang” the MIC camera temporarily on the DCA to make electrical connections, before bolting the camera to the DCA.
- Ensure that the unit case is properly earthed. If the product is at risk of being struck by lightning, ensure that earth bonding connections are made correctly to the mounting of the base of the unit.
- Do not point the camera at the sun. Bosch Security Systems will not be liable for any damage to cameras that have been pointed directly at the sun.

- Before transporting, supply power to the camera and rotate the camera head so that the window points toward the base. This position of the camera head will help to protect the wiper and the window during transit.
- Make sure that the installation conditions comply with the specified stresses of vibration and shock as mentioned in the datasheet.

**Warning!**

Do not manually back drive the camera

The motor/gear head combinations used in the MIC cameras were designed to provide smooth pan/tilt movement of the camera during powered operation. The gear heads were not specifically designed to be manually “back-driven” under any circumstance.

Although it might be possible to do so on unpowered units, there is no guarantee that “back-driving” will be possible on every unit. Some units may even enter a “locked-up” mechanical state.

If the camera becomes “locked-up,” simply apply power to the camera. The pan/tilt functions of the camera should now operate properly.

**Warning!**

Moving parts!

Moving parts may result in risk of injury, therefore, the device should be mounted so that it is accessible only to the technician/installer.

**Notice!**

Risk of injury or damage

To prevent injury to your hands or damage to the wiper, do not touch the wiper with your hands, especially when the wiper is moving.

**Notice!**

Always use a shielded twisted pair (STP) connection cable and a shielded RJ45 network cable connector where the camera is used outdoors or the network cable is routed outdoors. Always use shielded cables/connectors in demanding indoor electrical environments where the network cable is located in parallel with electrical mains supply cables, or where large inductive loads such as motors or contactors are near the camera or its cable.

**Notice!**

Bosch recommends the use of surge/lightning protection devices (sourced locally) to protect network and power cables and the camera installation site. Refer to NFPA 780, Class 1 & 2, UL96A, or the equivalent code appropriate for your country/region, and to local building codes. Refer also to the installation instructions of each device (surge protector where the cable enters the building, midspan, and camera).

**Notice!**

Outdoor installation

For details about the proper configuration for installing your camera outdoors with surge and lightning protection, refer to *Best Practices for Outdoor Installation*, page 56.

**Notice!**

To maintain the Type 6P rating when the camera is mounted to a MIC-DCA, installers must make sure that the user-supplied cable glands or conduit connections have Type 6P ratings.

The manufacturing datecodes of the products are explained in:
<http://www.boschsecurity.com/datecodes/>

Notice!

This device is intended for use in public areas only.
 U.S. federal law strictly prohibits surreptitious recording of oral communications.

Accessories - Do not place this unit on an unstable stand, tripod, bracket, or mount. The unit may fall, causing serious injury and/or serious damage to the unit. Use only with mounting solutions specified by the manufacturer. When a cart is used, use caution and care when moving the cart/unit combination to avoid injury from tip-over. Quick stops, excessive force, or uneven surfaces may cause the cart/unit combination to overturn. Mount the unit per the installation instructions.

Adjustment of controls - Adjust only those controls specified in the operating instructions. Improper adjustment of other controls may cause damage to the unit.

All-pole power switch - Incorporate an all-pole power switch, with a contact separation of at least 3 mm, into the electrical installation of the building. If the camera requires service, use this all-pole switch as the main disconnect device for switching off the voltage to the unit.

Camera signal - Protect the cable with a primary protector if the camera signal is beyond 140 feet, in accordance with *NEC800 (CEC Section 60)*.

Environmental statement - Bosch has a strong commitment towards the environment. This device has been designed to respect the environment as much as possible.

Electrostatic-sensitive device - Use proper ESD safety precautions when handling the camera to avoid electrostatic discharge.

Fuse rating - For security protection of the device, the branch circuit protection must be secured with a maximum fuse rating of 16A. This must be in accordance with *NEC800 (CEC Section 60)*.

Grounding:

- Connect outdoor equipment to the unit's inputs only after this unit has had its ground terminal connected properly to a ground source.
- Disconnect the unit's input connectors from outdoor equipment before disconnecting the grounding terminal.
- Follow proper safety precautions such as grounding for any outdoor device connected to this unit.

U.S.A. models only - *Section 810 of the National Electrical Code, ANSI/NFPA No.70*, provides information regarding proper grounding of the mount and supporting structure, size of grounding conductors, location of discharge unit, connection to grounding electrodes, and requirements for the grounding electrode.

Refer to the section "Best Practices for Outdoor Installation" of the manual for more information on outdoor installations.

Heat sources - Do not install unit near any heat sources such as radiators, heaters, or other equipment (including amplifiers) that produce heat.

Moving - Before moving the unit, disconnect both the 24 VAC connection and the Ethernet cable connection (if using PoE).

Outdoor signals - The installation for outdoor signals, especially regarding clearance from power and lightning conductors and transient protection, must be in accordance with *NEC725 and NEC800 (CEC Rule 16-224 and CEC Section 60)*.

Refer to the "Best Practices for Outdoor Installation, page 56" section of the manual for more information on outdoor installations.

Permanently connected equipment - Incorporate a readily accessible disconnect device in the building installation wiring.

Power lines - Do not locate the camera near overhead power lines, power circuits, or electrical lights, nor where it may contact such power lines, circuits, or lights.

Damage requiring service – Unplug the devices from the main AC power source and refer servicing to qualified service personnel whenever any damage to the device has occurred, such as:

- the power supply cable is damaged;
- an object has fallen on the device;
- the device has been dropped, or its enclosure has been damaged;
- the device does not operate normally when the user follows the operating instructions correctly.

Servicing - Do not attempt to service this device yourself. Refer all servicing to qualified service personnel.

This device has no user-serviceable internal parts.

Notice!

This is a **class A** product. In a domestic environment this product may cause radio interference, in which case the user may be required to take adequate measures.

Note: Changes or modifications not expressly approved by Bosch could void the user's authority to operate the equipment.

FCC & ICES Information

(U.S.A. and Canadian Models Only)

This device complies with part 15 of the FCC Rules. Operation is subject to the following conditions:

- this device may not cause harmful interference, and
- this device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a **Class A** digital device, pursuant to Part 15 of the FCC Rules and ICES-003 of Industry Canada. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a **commercial environment**. This equipment generates, uses, and radiates radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his expense.

Intentional or unintentional modifications, not expressly approved by the party responsible for compliance, shall not be made. Any such modifications could void the user's authority to operate the equipment. If necessary, the user should consult the dealer or an experienced radio/television technician for corrective action.

1.6 Important Notices - Illumination Safety

The text in this section applies only to cameras which have the optional illuminator accessory.

The IEC 62471 provides the methods to determine the risk group of any lamp or any product incorporating a lamp. The risk groups in IEC 62471 indicate the degree of risk from potential optical radiation hazards. The risk groups were developed based upon decades of lamp use experience and the analysis of accidental injuries related to optical radiation emission.

EXEMPT Group – no optical hazard is considered reasonably foreseeable, even for continuous, unrestricted use. Typical examples are most frosted incandescent lamps and fluorescent lamps used in domestic applications.

Risk Group 1 – products are safe for most use applications, except for very prolonged exposures where direct ocular exposures may be expected. An example of Risk Group 1 is a domestic battery operated torch (flashlight).

Exposure Hazard Value (EHV) is a ratio of the Exposure Level (distance, exposure time) to Exposure Limit Value (ELV). When EHV is greater than 1, the device has exceeded the Exposure Limit Values for a particular Risk Group. The ELV is the level where optical radiation to the eye or skin is not expected to result in adverse biological effects.

The **Hazard Distance (HD)** is the distance from the source at which the Exposure Level equals the appropriate ELV. In other words, when EHV=1 for a particular Risk Group.

Regarding the Cornea / Lens infrared hazard of this product, the Exposure Hazard Value (EHV) at a test distance of 200mm is 2.19 based on EXEMPT Group exposure limits. The EHV based on Risk Group 1 limits is 0.386. The HD for the Exempt Group is 297 mm.

Regarding the Retinal Blue Light hazard, the EHV is 22.9 based on the EXEMPT Group exposure limits and a test distance of 200 mm. The EHV based on Risk Group 1 limits is 0.266. The HD for the Exempt Group is 2675 mm.

These values have been summarized in the table below:

Hazard	EXEMPT Group Limits			Risk Group 1 Limits		
	t, duration	d, distance	EHV	t, duration	d, distance	EHV
Cornea / Lens Infrared Hazard	1000 s Hazard Distance	200 mm 279 mm	2.19	100 s	200 mm	0.386
Retinal Blue Light Hazard	10,000 s Hazard Distance	200 mm 2675 mm	22.9	100s	200 mm	0.266

1.7 Customer Support and Service

If this unit needs service, contact the nearest Bosch Security Systems Service Center for authorization to return and shipping instructions.

More Information

For more information, please contact the nearest Bosch Security Systems location or visit www.boschsecurity.com.

2 Introduction

- This equipment should be unpacked and handled with care. Check the exterior of the packaging for visible damage. If an item appears to have been damaged in shipment, notify the shipper immediately.
- Verify that all the parts listed in the Parts List below are included. If any items are missing, notify your Bosch Security Systems Sales or Customer Service Representative.
- Do not use this product if any component appears to be damaged. Please contact Bosch Security Systems in the event of damaged goods.
- The original packing carton (if undamaged) is the safest container in which to transport the unit and must be used if returning the unit for service. Save it for possible future use.

Caution!

Take extra care lifting or moving MIC cameras because of their weight.

The MIC packaging is designed:

- to allow installers to configure the camera inside the shipping box.
- to provide a temporary table-top or desk-top stand.

2.1 Configuration with Project Assistant app

You can also use the Project Assistant app to complete the initial configuration of the camera. In order to use this device with the Project Assistant app by Bosch, you must download the app from the Bosch Download Store, from Google Play, or from the Apple Store.

You can access the app in several ways:

- Scan the QR code from the QIG.
- From www.boschsecurity.com, select Support > Apps and Tools > Online Apps - Video > Bosch Project Assistant app. Select the appropriate operating system, and then click the appropriate button to download and install the app.
- From Google Play Store (play.google.com), search for Bosch Project Assistant. Select the app from the list. Click the Install button.
- From Apple Store (itunes.apple.com), search for Bosch Project Assistant. Select the app from the list. Click the appropriate button to download and install the app.

3 Product Description

The camera's ruggedized design meets customer expectations in demanding environments that exceed the capabilities of conventional IP cameras. Even in installations subject to harsh shock/vibration conditions and/or extreme weather, the camera provides high-quality video images.

- Make sure that the installation conditions comply with the specified stresses of vibration and shock as mentioned in the datasheet.

The MIC IP starlight 7000i camera is an advanced PTZ surveillance platform for mission-critical applications. With starlight imaging technology and excellent low-light sensitivity, the MIC IP starlight 7000i camera is the perfect solution for robust and high-quality imaging needs.

The camera also has a 30x optical zoom (12x digital) and flexible, field-selectable mounting orientations (upright, inverted, or canted) to achieve the perfect field of view.

A long-life silicone wiper blade mounted on a spring-loaded arm is standard on all MIC cameras.

The following table identifies the optional accessories for MIC cameras. Refer to the datasheets of each accessory for details. Some accessories may not be available in all regions.

Accessories	Description	Accessories	Description

4 Overview of Installation Steps

**Caution!**

Installation must be made by qualified personnel and conform to ANSI/NFPA 70 (the National Electrical Code® (NEC)), Canadian Electrical Code, Part I (also called CE Code or CSA C22.1), and all applicable local codes. Bosch Security Systems accepts no liability for any damages or losses caused by incorrect or improper installation.

**Caution!****ELECTRIC SHOCK HAZARD**

To reduce the risk of electric shock, disconnect power to the camera and/or to the power supply unit before moving the camera, before installing any accessories, and before mounting the camera.

Before you install your MIC camera, inspect the camera for any scratches or damage to the surface finish/paint. If you notice damage to the paint, return the unit for a replacement.

1. Select the Mounting Location and Orientation.
2. Install the appropriate power supply--VIDEOJET connect (VJC-7000-90), 24 VAC (VG4-A-PSU1 or VG4-A-PSU2)--or midspan (60 W version or 95 W version), and/or the alarm/washer interface (MIC-ALM-WAS-24) (all sold separately) as necessary. Refer to the Installation Manual of the appropriate device for installation instructions.
3. Install grounded metal conduit (user-supplied) to the MIC DCA (sold separately) (and to the PSU if necessary), install wiring (user-supplied), and then make the necessary connections for power, telemetry, and video.
4. (Optional) Install the Illuminator Accessory. (Illuminator accessory sold separately.)
5. (Optional) Install the sunshield. (Sunshield sold separately.)
6. Install the Camera on the MIC-DCA.
6. Install the Camera Directly to a Mounting Surface.
7. *Connections, page 45.*
8. (Optional) *(Optional) Canting the Camera, page 33.*

5

Mounting

5.1

Mounting Location and Orientation Options

MIC cameras are designed for easy installation in various locations such as directly onto buildings and poles suitable to support CCTV equipment.

Select a secure installation location and mounting orientation for the device. Ideally, this is a location where the device cannot be interfered with either intentionally or accidentally.

Select a location where the MIC camera will not touch materials such as steel straps or cables.

You can install the camera:

- onto a MIC-DCA or a MIC wall mount (MIC-WMB) with a MIC shallow conduit adapter (MIC-SCA). (Never install the wall mount only.)
- or
- directly to a mounting surface using the supplied base gasket and the appropriate connector kit (sold separately):
 - MIC-IP67-5PK MIC7000 IP67 Connector Kit

To have an installation rated IP67, you must use the appropriate IP67 Connector Kit from Bosch.

Confirm that no residual water or moisture is in the bottom of camera. Ground the camera as described in the chapter “Installing a MIC Camera on a Hinged DCA.”

The most common type of mounting location is the top of a pole suitable to support CCTV equipment and that provides a robust mounting platform to minimize camera motion and typically has a large base cabinet for mounting ancillary equipment such as power supplies.

Other locations for mounting the camera include the top of a building, the side (wall) of a building, the corner of a building, and under the eave of a building.

The camera can also be mounted on the side of a lamp post, pole, or similar column using the Pole Mount Bracket (MIC-PMB). Be aware that lamp posts can often be subject to movement and are not suitable platforms in all conditions or for all applications.

Notice!

Outdoor installation

For details about the proper configuration for installing your camera outdoors with surge and lightning protection, refer to *Best Practices for Outdoor Installation*, page 56.

Ensure that the location has the appropriate clearance from power and lightning conductors, in accordance with *NEC725* and *NEC800 (CEC Rule 16-224 and CEC Section 60)*.

Do not install the device near:

- Any heat sources
- Any overhead power lines, power circuits, or electrical lights, or where the device may contact power lines, circuits, or lights

Isolate shielded CAT5e or CAT6 cable from any high voltage power lines in a separate grounded, metal conduit. Refer to the datasheet for test conditions for allowable transients / voltage fluctuations.

Mounting surface recommendations for MIC mounting accessories

The mounting surface should be capable of supporting the combined weight of the MIC camera + MIC Illuminator + MIC mounting accessory (DCA, wall mount, corner bracket, etc.).

All expected conditions of load, vibration and temperature should be considered when planning an installation. The material should accommodate a minimum pull-out strength of 275 kg (600 lb).

The mounting accessory should be secured to one of the following surfaces:

- Concrete (solid / cast)
- Concrete masonry unit (concrete block)
- Brick (all types)
- Metal (steel / aluminum, minimum 3 mm (0.125 in.) thick)

In all situations, Bosch recommends referencing any applicable building codes or professional structural engineering guidelines for a secure installation.

- ▶ Ensure that the selected mounting surface is capable of supporting the combined weight of the camera and mounting hardware (sold separately) under all expected conditions of load, vibration, wind, and temperature.

Caution!

Risk of lightning strikes

If the camera is installed in a highly exposed location where lightning strikes may occur, then Bosch recommends installing a separate lightning conductor within 0.5 m (1.6 ft) of the camera and at least 1.5 m (4.9 ft) higher than the camera. A good earth bonding connection to the camera housing itself will provide protection against damage from secondary strikes. The camera housing itself is constructed to cope with secondary strikes. If the correct lightning protection is applied, then no damage to the internal electronics or camera should result.

5.2

Mounting Options

See the figures that follow for illustrations of the correct and the incorrect mounting orientations of MIC cameras.

MIC cameras are designed to be mounted upright (straight up, 90°), inverted (straight down, 90°), or canted upright (ball up, 45°). The tilt limits for the canted unit prevent it from working properly if mounted ball down. See the figures below for illustrations of the correct and the incorrect mounting orientations of MIC cameras.

Correct mounting orientation - upright, inverted - Correct mounting orientation - canted
Incorrect mounting orientation

Note: For canted cameras, ensure that your mounting location provides the necessary clearance (370 mm (14.6 in.)) for the camera head to pan.

Figure 5.1: Top view of canted MIC7000 illustrating distance of pan clearance
 The figure below illustrates the tilt range of the camera in upright orientation.

Figure 5.2: MIC7000 Tilt Range: 145° each direction; 290° if AutoPivot enabled

5.3 Mounting Bracket Options

Bosch sells a complete series of mounting brackets that support multiple mounting configurations.

Always use only Bosch-supplied mounts, which are designed for safe installation of your MIC camera.

Refer to the MIC Series Mounting Brackets Installation Guide for complete installation instructions.

Mounting hardware recommendations for MIC mounting accessories

Fasteners are not supplied with the MIC mounting accessories for attachment to the mounting surface. The type of fastener necessary is dependent on the mounting surface.

Fasteners can include wedge anchors, sleeve anchors, single expansion anchors, double expansion anchors, machine screws or 'Thru-Bolting' with a nut.

Fasteners are to be of a structural grade (ISO Class 10.9, SAE Grade 8) and zinc plated for moderate corrosion resistance. When installed in marine or similarly corrosive environments, stainless hardware (A2-800, A4-800) is recommended.

Fasteners are to be a minimum diameter of 8 mm (0.3125 in.).

All bolts must extend through the mounting surface and be secured with a flat washer, lock washer and nut. All studs must be anchored to concrete or welded to a steel backing plate.

In all situations, Bosch recommends referencing any applicable building codes or professional structural engineering guidelines for a secure installation.

Deep Conduit Adapter

The hinged DCA is well-suited to installations on top of a pole.

Typical hinged DCA mount configuration

Wall Mount

Figure 5.3: Typical Wall mount configuration

Note: Always install an SCA when you install a wall mount for any installation configuration. Route cables through the bottom of the SCA (to prevent water from running into the side or top of the SCA along the cables).

Pole Mount

The figure below identifies the three mounting accessories (each sold separately) that are necessary to mount the MIC camera on the side of a pole.

Note: The figure identifies the part numbers, as well as the codes for the available colors (-BD for black, -WD for white, and -MG for grey) of each mounting accessory.

Figure 5.4: Typical Pole mount configuration

Corner Mount

Figure 5.5: Typical Corner mount configuration

Note: Always install an SCA when you install a wall mount for any installation configuration.

Route cables through the bottom of the SCA (to prevent water from running into the side or top of the SCA along the cables).

Surface Mount

Figure 5.6: Direct surface mount – camera upright (MIC + base gasket)

Figure 5.7: Direct surface mount – camera inverted (MIC + base gasket + IP67 Weatherization/Connector Kit)

5.4

Considerations for Mounting the Camera in Inverted Orientation

To change the camera orientation to “Inverted,” complete the following steps:

1. Remove the camera from the shipping box.
2. Apply power to the camera.
3. Access the web browser of the camera.
4. Access the page Configuration.
5. Navigate to Camera > Installer Menu > Orientation.
6. Select “Inverted.”

The camera head will rotate automatically into inverted position (180°).

Note the position of the visor when the camera is installed in inverted orientation. The visor will now be near the body of the camera.

Figure 5.8: MIC camera with camera head inverted

Note: It is not necessary to remove the section for the illuminator on the sunshield because the illuminator is attached to the opposite side of the camera visor.

Seal the mount so that moisture or water cannot collect and stay in the bottom of the MIC camera.

The figure that follows shows the camera installed in inverted orientation on a pole.

Figure 5.9: MIC camera mounted in inverted orientation (on pole)

6 (Optional) Configuration Programming in the Shipping Box

The camera packaging allows installers to connect the camera to the network and configure the camera still in the box.

Caution!

Risk of damage to camera

Do not change the camera orientation to “Inverted” while the camera is still in the box. The camera head must be free to rotate. If you must change the camera’s orientation to “Inverted,” remove the camera from the box and configure it by following the steps in *(Optional) Configuration Programming on a Temporary Table-top Stand*.

1. Remove the accessories box from the top, middle section of the box.
2. Supply power to the camera and *Connect the Camera to the Network, page 47*. Note that the wiper moves one to three times across the camera window, and then returns to parked position.
3. Configure the camera. Refer to the separate User Manual for details.
4. Disconnect the wires/cables from the connectors in the base of the camera.

Refer to

- *(Optional) Configuration Programming on a Temporary Table-top Stand, page 25*

7 (Optional) Configuration Programming on a Temporary Table-top Stand

Caution!

Take extra care lifting or moving MIC cameras because of their weight.

The camera (still in the foam) can stand temporarily on a flat, horizontal surface such as a desk or a table during initial network connection and configuration.

1. Remove the accessories box from the top, middle section of the box.
2. Remove the foam covering the head of the camera.
3. Remove the camera, still in the foam, from the box. Place the camera upright on a flat, horizontal surface.

4. Supply power to the camera and *Connect the Camera to the Network*, page 47. Note that the wiper moves one to three times across the camera window, and then returns to parked position.
5. Configure the camera. Refer to the separate User Manual for details.

Notice!

If you change the camera orientation to “**Inverted**” (from the page **Configuration** of the web browser: **Camera > Installer Menu > Orientation**), then the camera head will rotate automatically into inverted position (180°). Note that the visor will now be near the body of the camera.

6. Disconnect the wires/cables from the connectors in the base of the camera.

8 (Optional) Installing the Illuminator

Use the correct set of tools as well as the recommended torque values given in the instructions that follow. The use of the wrong tools or torque values may cause damage to threads or seal caps, which may result in leaks or damage to paint, which then may lead to the start of corrosion.

Parts List

Quantity	Component
1	MIC Illuminator accessory
1	Spanner wrench [to remove the access plug from the camera head]
3	M4x10 socket head Torx screws
1	Quick Installation Guide

Additional Tools Required

1	Torx driver, T20, for M4 Torx screws
1	Phillips-head screwdriver, #2, to remove factory-installed plastic screws from the camera head

Warning!

IR emitted from this product.
Meets IEC 62471, Risk Group 1.

Notice!

This product has been tested according to standard IEC62471:2006 “Photobiological safety of lamps and lamp systems”. The product emissions exceed the EXEMPT Group limit for both Retinal Blue Light and Cornea/Lens infrared hazard as defined by IEC 62471:2006. The product was found to meet the Risk Group 1 exposure limits for IR and White LEDs.

Refer to the MIC7000 Operation Manual for complete information on illumination safety.

Notice!

If the MIC camera will have both illuminator and sunshield accessories, install the illuminator first.

1. Mount the camera or stand it temporarily in the packaging foam on a stable surface before proceeding. (Refer to the Operation Manual.)

If the camera will be mounted inverted, you must rotate the tilt head before attaching the illuminator.

1. Apply power.
2. Connect to your network.
3. From the web browser, access the camera’s Configuration page. Select Camera > Installer Menu > Orientation.
4. Select “Inverted”. Click **Set** to confirm the selection. The camera head will rotate automatically into inverted position (180°).

Regardless of mounting orientation, the visor should always be above the camera window. Apply power and connect to your network as illustrated in the figure below.

From the web browser, access the camera's Settings page. Select **Advanced > Camera > Installer Menu > Orientation**, and then select "Inverted". Click **Set** to confirm the selection. The camera head will rotate automatically into inverted position (180°). Regardless of mounting orientation, the visor should always be above the camera window.

2. Remove and discard the three (3) plastic screws **surrounding the appropriate access port where the illuminator will be installed.**

3. Remove the appropriate access plug from the camera head with the supplied spanner wrench. For upright cameras, remove the plug near the visor. For inverted cameras, remove the plug farther away from the visor.

Bosch suggests storing the access plug inside the DCA mount (or wall mount accessory) in case it becomes necessary to remove the illuminator.

4. Remove the plastic cap from the illuminator accessory. Discard.

5. Align the illuminator over the access port and carefully push into position on the camera head.

1		0 - 0.7 N m
2		0.7 - 1.4 N m
3		1.4 N m

6. Partially engage the threads of all three (3) screws. Do not tighten any one screw completely at this point.

- Using the T20 Torx driver, tighten the screws to the proper torque using the sequence described in the previous figure.

Warning!

Total engagement is not complete until you tighten all three (3) screws.

7. Remove the translucent film.

8. Installation of the illuminator is complete.

9 (Optional) Canting the Camera

Note:

For simplicity, the graphics in this section are only of the camera (and the specific accessory that you are installing, if applicable). The graphics do not depict other accessories that you may have installed already.

MIC7000 / MIC IP starlight 7000i cameras have on-site canting functionality.

Installers can adjust the camera from an upright position to a canted position (45° angle) if necessary. In this position, the field of view (FOV) of the camera includes the scene directly beneath the camera.

You cannot install a canted unit in inverted orientation (with the camera head down). The tilt limits of the camera prevent correct operation in inverted and canted orientation.

Warning!

Risk of bodily injury.

Unplug the device from its power source before canting the device. After removing the screws from the yoke arms, support the camera head so that it doesn't tilt downward unexpectedly and pinch fingers or other body parts.

Notice!

Risk of damage to the camera

Do not, under any circumstances, cant the camera while the camera is on its side. Cant the camera from an upright position only, in order to prevent screws or other objects from falling into the open spaces in the arms when the yoke caps are removed.

Figure 9.1: Do NOT allow screws or other objects to fall inside camera!

Warning!

Risk of bodily injury

Do not put a canted (45°) camera in an upright position on the camera base or on an unsecured DCA. In this position, the camera can fall over and can cause injury or be damaged. Put the canted camera on its side until installation.

Notice!

Install the applicable accessories (illuminator, sunshield) before you cant the camera.

Use the correct set of tools as well as the recommended torque values given in the instructions that follow. The use of the wrong tools or torque values may cause damage to threads or seal caps, which may result in leaks or damage to paint, which then may lead to the start of corrosion.

Bosch strongly recommends attaching the camera to a DCA and mounting the DCA before canting the camera.

To cant the camera, follow these steps:

1. Remove the yoke cap (item 2 in the figure below) on one yoke arm of the camera, using the supplied spanner wrench (item 1).

Repeat for the second arm.

Figure 9.2: Remove yoke caps with spanner tool

2. Remove the two (2) screws at the bottom of one yoke arm using a wrench (user-supplied) as described below.

Figure 9.3: Remove screws from yoke arms

Notice!

Risk of damage to the device.

Without the yoke arm screws in position, the camera head can fall and be damaged. Hold the head of the camera as you complete the next four (4) steps.

- 3. Put the screws in a safe place. You will reinstall the screws at step 6.
- 4. Repeat steps 2 and 3 for the second yoke arm.
- 5. Rotate the arms and the head assembly forward.

Notice!

Risk of damage to the device.

Do not cant the camera, or let it fall, in the wrong direction. The camera should cant only in the direction indicated in the figure directly below.

Figure 9.4: Cant the camera head

- 6. Reinsert the screws into both yoke arms. Note the letter assigned to each screw in the figure below.

Figure 9.5: Reinsert yoke arm screws (ABCD)

- 7. Using a torque wrench (user-supplied), tighten the screws to the proper torque using the sequence described in the table below.
- 8. Recheck all four screws to ensure the proper torque value.

Do not use grease on the screws.

Torque requirements for yoke arm screws

		SN ≥ xxxxxxx46029xxxxxx (> Dec. 2014)
		 5 mm Hex (T30 Torx)
1		≈ 7.5 N m (≈ 5.5 ft lb)
2		≈ 17 N m (≈ 12.5 ft lb)
3		≈ 17 N m (≈ 12.5 ft lb)
4		≈ 17 N m (≈ 12.5 ft lb)

9. Attach the yoke caps using the supplied spanner wrench.

Figure 9.6: Attach yoke caps

10. Canting is complete.

11. Change the camera orientation to “Canted.” Complete the following steps:
 - Access the page Configuration.
 - Navigate to Camera > Installer Menu > Orientation.
 - Select “Canted.”

10

Replacing a wiper assembly

1. Put a piece of thin, protective material between the window glass and the wiper to prevent accidental damage.

2. With one hand, hold the wiper arm firmly in place to restrict rotational movement.
3. With the other hand, using a 7mm Hex socket or nut driver, rotate the acorn nut counter-clockwise until the nut is free from the wiper shaft.

4. Remove the wiper spring, hub, arm, and blade assembly from the wiper shaft.

5. Assemble the new wiper arm on the new wiper hub.

6. Insert the new blade assembly into the new wiper arm.

7. Slide the new wiper hub and the attached parts onto the wiper shaft.

- Slide the new wiper spring onto the wiper shaft and over the new wiper arm.

9. Apply Loctite 243 to the cavity of the acorn nut.
10. Lightly thread the new acorn nut onto the wiper shaft over the new wiper spring and new wiper hub.

11. With one hand, hold the new wiper arm firmly in place to restrict rotational movement and to keep the wiper assembly parallel with the flat top of the glass.
12. With the other hand, using a 7mm Hex socket or nut driver, tighten the new acorn nut clockwise to a torque value of 1.0 Nm.

11 Connections

11.1 About Camera Power and Control

The camera incorporates a network video server that encodes video images and PTZ control commands for transmission over a TCP/IP or UDP/IP network.

With its H.264 or H.265 encoding, it is ideally suited for IP communication and for remote access to digital video recorders and multiplexers. Use existing networks to achieve quick and easy integration with CCTV systems or local networks. Several receivers can receive video images simultaneously from a single camera.

11.2 Power Source Options

The camera can be powered by a network compliant to High Power-over-Ethernet using a Bosch model of High PoE Midspan (sold separately). With this configuration, only a single cable connection

(Cat5e/Cat6 Shielded Twisted Pair (STP)) is needed to view, to power, and to control the camera.

For maximum reliability, the camera can be connected simultaneously to a High PoE Midspan and a separate 24 VAC power source. If High PoE and 24 VAC are applied simultaneously, the camera usually selects the High PoE Midspan and will draw minimal power from the auxiliary input (24 VAC). If the High PoE Midspan power source fails, the camera switches power input seamlessly to 24 VAC. After the High PoE Midspan power source is restored, the camera switches power input again to the High PoE Midspan.

Bosch recommends 24VAC power output of 24V at 100VA, 4A with a slow blow fuse.

The power supply must be certified to UL/IEC 60950-1 2nd Edition, AM1+AM2 or UL/IEC 62368-1 2nd Ed, Output 24 VAC, LPS, +65 °C (+149 °F) min.

In the table below, an "X" identifies the power source options for MIC IP camera models.

CAMERA MODELS	60 W midspan	95 W midspan	VIDEOJET connect 7000	24 VAC PSU
Models with illuminator		X	X	
Models without illuminator	X	X	X	X

Bosch recommends only a midspan power source for models with an attached illuminator.

The table below identifies the power devices that can be connected simultaneously to the camera.

If power is supplied from:	Camera can receive power simultaneously from:
60 W midspan (NPD-6001B)	24 VAC PSU: VG4-A-PSU1 or VG4-A-PSU2
95 W midspan (NPD-9501A)	
VIDEOJET connect 7000 (VJC-7000-90)	

Notice!

Connect the 24 VAC connections from the MIC camera to the *heater* output of the power supply (VG4-A-PSU1 or VG4-A-PSU2).

Caution!

Compliance with EN50130-4 Alarm Standard – CCTV for Security Applications
 To meet the requirements of the EN50130-4 Alarm Standard, an ancillary uninterruptable power (UPS) supply is necessary. The UPS must have a **Transfer Time** between 2–6 ms and a **Backup Runtime** of greater than 5 seconds for the power level as specified on the product datasheet.

11.3 Ethernet Connections

Caution!

Ethernet cables must be routed through earth-grounded conduit capable of withstanding the outdoor environment.

Cable Type	Cat5e/Cat6 Shielded Twisted Pair (STP) Ethernet (directly to the camera, or to a network switch between the camera and the network) Note: Cat5e/Cat6 Shielded Twisted Pair (STP) cable is required in order to meet European regulatory EMC standards.
Maximum Distance	100 m (330 ft)
Ethernet	10BASE-T/100BASE-TX, auto-sensing, half/full duplex
Terminal Connector	RJ45, Male
High PoE	For models with attached illuminators: Use the 95 W midspan sold by Bosch. For models <i>without</i> illuminators: Use the 60 W midspan sold by Bosch, or a midspan that is compliant to the IEEE 802.3at, class 4 standard.

Note: Consult the National Electrical Code (NEC) or other regional standards for cable bundling requirements and limitations.

11.4 Camera Connections

All electrical and data connections from the camera are made from the connectors in the base of the camera.

Figure 11.1: Connectors from the base of the MIC camera

	Description	Wire Color
1	RJ45 (Cat5e/Cat6) connector (male) (supporting High PoE) for power and communication between a Bosch model of High PoE Midspan or a VJC-7000-90	
2	24 VAC power wires (24 gage) to VG4-A-PSU1 or VG4-A-PSU2 (if not using a PoE network)	Line (L) = Black Neutral (N) = White
3	Chassis (Earth) ground wire (18 gage) with connector lug	Green
4	RS-485 connections for communication to / from the MIC-ALM-WAS-24	+ = Purple - = Yellow GND = Brown
5	Liquid-tight cord grip in the base of the camera	

* For more information, refer to the installation manual *Power Supply Units (AUTODOME VG5- and MIC IP Camera Models)* (shipped with VG4-A-PSU1 and VG4-A-PSU2).

Note: If the MIC camera will be installed directly to a mounting surface, instead of onto a MIC DCA or a MIC wall mount bracket, Bosch recommends using the connector kit for your model of camera to protect the connections against moisture and dust particles. Each kit provides components for connecting as many as 5 MIC cameras.

MIC-IP67-5PK MIC7000 IP67 Connector Kit

Not using the IP67 Connector Kit will void the camera warranty.

Note: The PoE connection is not intended to be connected to exposed (outside plant) networks.

Seal the base of the camera against moisture ingress (standing water).

11.5 Connect the Camera to the Network

Note: The total length of Cat5e/Cat6 Shielded Twisted Pair (STP) cable must be less than 100 m (328 ft) between the camera and the head-end system.

1. Make the appropriate network connections depending on the power source of your IP network:

- If using a High PoE **midspan** power source:
 - a. Connect one end of a Cat5e/Cat6 Shielded Twisted Pair (STP) Ethernet cable to the RJ45 connector of the camera.
 - b. Connect the other end of the cable to the DATA + POWER OUT port on the midspan.
Note: You must ground cable at both ends!
 - c. Connect a Cat5e/Cat6 Shielded Twisted Pair (STP) Ethernet cable from the DATA port of the midspan device to the Local Area Network (LAN).
 - If **not using** High PoE: Connect a Cat5e/Cat6 Shielded Twisted Pair (STP) Ethernet cable from the RJ45 connector of the camera to the Local Area Network (LAN).
 - If **not using PoE and if connecting directly** to a computer, DVR/NVR, or other related network device: Connect either a Cat5e/Cat6 Shielded Twisted Pair (STP) Ethernet cable or a **crossover** Ethernet cable between the RJ45 connector of the camera and the network device. **Note:** You must ground cable at both ends!
2. If applicable, connect the 24 VAC wires to the power source.
 3. If applicable, connect the RS-485 wires to the MIC-ALM-WAS-24 (optional).
 4. Attach the ground wire from the camera to an earth-ground connection on the mounting surface using the supplied screw or a suitable user-supplied fastener.

12

Typical System Configurations

12.1

Typical IP Configuration with High PoE midspan (no I/O connections)

Figure 12.1: Typical IP configuration with High PoE Midspan (no I/O connections)

1	MIC camera
2	MIC Hinged DCA (MIC-DCA-Hx)
3	High PoE (Network) cable (Cat5e/Cat6 Shielded Twisted Pair (STP)) (user-supplied) between camera and High PoE Midspan
4	95 W midspan (NPD-9501A) or 60 W midspan (NPD-6001B)
5	Data-only IP cable (Cat5e/Cat6 Shielded Twisted Pair (STP)) (user-supplied) between midspan and head-end network

Note: The total length of Cat5e/Cat6 Shielded Twisted Pair (STP) cable must be less than 100 m (328 ft) between the camera and the head-end system.

12.2 Typical Configuration with MIC-ALM-WAS-24

Figure 12.2: Typical configuration with MIC-ALM-WAS-24

1	MIC7000 camera	6	24 VAC Power pack, 1A, 50/60 Hz (user-supplied)
2	MIC Hinged DCA (MIC-DCA-Hx)	7	Washer pump accessory
3	RS-485 cable, 3-conductor (user-supplied)	8	Interface cable for washer control (user-supplied)
4	MIC-ALM-WAS-24 enclosure	9	Alarm input / output interface cables (user-supplied)
5	Interface cable for 24 VAC (user-supplied) for MIC-ALM-WAS-24	10	Monitored Normally Open switch for Supervised Alarm (user-supplied)

12.3 Typical IP Configuration with VJC-7000-90

Cat5e/Cat6e = 100 m max.

Figure 12.3: Basic configuration with VIDEOJET connect 7000

1	Ethernet (network) cable (Cat5e/Cat6 Shielded Twisted Pair (STP)) (user-supplied) between a Bosch camera and the port labeled <i>PoE</i> on VIDEOJET connect 7000
2	Data-only IP cable (Cat5e/Cat6 Shielded Twisted Pair (STP)) to the head-end network Note: The cable to the head-end also can be fiber optic cable from one of the two SFP slots.
3	Alarm input / output interface cables (user-supplied)
4	Alarm output cables (user-supplied)
5	120 / 230 VAC, 50/60 Hz
6	Audio input interface cable (user-supplied)
7	External washer pump (user-supplied)
8	Washer output, 2-conductor (user-supplied)

Note: The total length of Cat5e/Cat6 Shielded Twisted Pair (STP) cable must be less than 100 m (328 ft) between the camera and the head-end system.

13

Troubleshooting

Table of Troubleshooting Issues

The table below identifies issues that could occur with the camera, and how to resolve them.

Note: Refer to the *Error Codes, page 58* section of the manual for descriptions of the error codes that appear on the OSD. The section also lists recommended actions to resolve the error codes.

Camera reboots frequently or intermittently	Your camera has an improper network connection. Test your camera with another power supply. Check the Bosch website for a software update that might address the issue.
No OSD messages appear.	Bosch's Video SDK is required. Video management software from third parties does not use the SDK.

14 Maintenance

Regular maintenance of your MIC camera will preserve the MIC, especially the surface finish, for an extended period.

Cleaning – Remove power from the device before cleaning. Generally, using a dry cloth for cleaning is sufficient, but a moist, fluff-free cloth may also be used. Do not use liquid cleaners or aerosol cleaners.

In corrosive environments, you should clean the camera surface periodically with fresh water.

- ▶ Wash the camera thoroughly with fresh water:
- Regularly (1-2 times per quarter, or more frequently if possible)
- Immediately after an event such as a sea storm that could introduce a layer salt on the camera's surface

Use a flow rate of 150-145 liter/minute. Hold the nozzle a minimum distance of 1 m from the camera.

- ▶ In certain use cases, it might help to use a solution of hydrophobic liquid to prevent long-term buildup of salt layers on the camera's surface.

Note: Do not use water pressure greater than 96.5 kPa (14 psi) to wash the unit.

No User-serviceable Parts

Except for the external wiper blade, the device contains no user-serviceable parts. Contact your local Bosch service center for device maintenance and repair. In the event of failure, the device should be removed from site for repair.

On-Site Inspection

It is recommended that the device be inspected on-site every six months to check mounting bolts for tightness, security, and any signs of physical damage. Inspection of this device shall only be carried out by suitably-trained personnel in accordance with the applicable code of practice (for example, EN 60097-17).

Information about cameras with illuminators

The text in this section applies only to cameras which have the optional illuminator accessory. When servicing the device, disconnect power to the device to avoid possible exposure to the eyes. If disconnecting power to the device is not possible, use appropriate shielding to block the LED arrays or wear appropriate eye protection.

Illuminator removal

If you must remove the illuminator because it is damaged or has failed, follow these steps:

1. Remove the three (3) M4 Hex screws.
2. Install the access plug (which may be stored in an access hole of the MIC-DCA or the wall mount accessory; if not, see the note below).

Note: If you do not have an access plug, **do not remove the illuminator** until you request and receive a new access plug from Bosch.

15

Disposal

Disposal

Your Bosch product has been developed and manufactured using high-quality materials and components that can be reused.

This symbol means that electronic and electrical devices that have reached the end of their working life must be disposed of separately from household waste.

In the EU, separate collecting systems are already in place for used electrical and electronic products. Please dispose of these devices at your local communal waste collection point or at a recycling center.

16

Technical data

For product specifications, see the datasheet for your camera, available on the appropriate product pages of the Online Product Catalog at www.boschsecurity.com.

17 Best Practices for Outdoor Installation

Cameras installed outdoors are susceptible to surges and lightning. Always include surge and lightning protection when installing outdoor cameras.

The following figure is an illustration of the proper configuration for installing IP PTZ cameras (AUTODOME and MIC) outdoors with surge and lightning protection. Note that the illustration does not include representations of all models of AUTODOME and MIC cameras.

The illustration can represent any IP camera. Mounting hardware varies between units.

Figure 17.1: Correct outdoor installation with proper surge/lightning protection

1	Indoor main building	2	Network equipment
3	Connect the ground of the camera power supply to the building earth ground.	4	Surge protection
5	Connect the ground of the camera to the ground of the surge protector.	6	Install Cat5e/Cat6 (Shielded Twisted Pair (STP)) Ethernet cable. Route the cable through grounded, metal conduit. Isolate high voltage power lines in a separate conduit.
7	Equipment enclosure	8	Outdoor rated High PoE-compatible midspan
9	Connect the Bus Bar to the Equipment Grounding Electrode.	10	Outdoor High PoE-compatible surge protection to protect indoor equipment
11	Equipment Grounding Electrode	12	Lightning Rod
13	Down Conductor; refer to NFPA 780, Class 1 and 2.	14	Install outdoor High PoE-compatible surge protection as close as possible to the camera. Connect to the Equipment Grounding Electrode.
15	Lightning Rod Grounding Electrode		

18 Error Codes

For certain conditions, MIC cameras will display status codes on the video image. The table below identifies the status codes, their descriptions, and the recommended action to resolve the condition.

Most status codes appear on the OSD until you acknowledge them. The codes identified with asterisks (**) appear for approximately 10 seconds, then disappear automatically.

To clear the status code in the OSD, send the appropriate acknowledge command. If necessary, refer to the operation instructions in the Video Management System software for issuing acknowledge commands, or to the appropriate section in the User Manual for your MIC camera for details on issuing the “AUX OFF 65” command.

Status Code	Description	Recommended action (to be completed by a qualified Service Technician)
2	Capacity of external PoE device is insufficient to support operation of the camera's window defroster. Note: MIC IP fusion 9000i only.	An incorrect type of PoE (such as one based on IEEE 802.3af) with insufficient power output may be connected to the camera.*
3	Capacity of external PoE device is insufficient to support operation of the camera's internal heater.	An incorrect type of PoE+ or PoE++ (such as one based on IEEE 802.3af or IEEE 802.3at) with insufficient power output may be connected to the camera.*
4	Capacity of the external PoE device is insufficient to support operation of the camera's window defroster. Note: MIC IP fusion 9000i only.	An incorrect type of PoE+ or PoE++ (such as one based on IEEE 802.3af or IEEE 802.3at) with insufficient power output may be connected to the camera.*
5	When operating using redundant power sources, the camera is detecting insufficient voltage being provided by the external High PoE power source.	<ol style="list-style-type: none"> 1. Verify that the High PoE power source (midspan or switch) can provide 95 W of output power. 2. Verify that the network cable is not longer than 100 m maximum. 3. If using the 95W High PoE Midspan (NPD-9501A), verify that both LEDs are green. If not, refer to the “Troubleshooting” section of the installation manual of the midspan.
6	When operating using redundant power sources, the camera is detecting insufficient voltage being provided by the external 24 VAC power source.	<ol style="list-style-type: none"> 1. Verify that the 24 VAC power source can provide at least 4.0 A to the camera. 2. Verify that the wire gage of the power cable is sufficient for the distance between the power source and the camera and that the voltage getting to the user cable of the camera is between 21 VAC and 30 VAC.
7	Camera may be operating in an environment where ambient temperature is below the specification of the camera.	<ol style="list-style-type: none"> 1. Verify that the ambient temperature is not below -40 °C (-40 °F).

Status Code	Description	Recommended action (to be completed by a qualified Service Technician)
		<p>2. Review the diagnostic log of the camera (accessible from the Service menu) for errors related to the operation of the internal heaters.</p> <p>Note: Motorized zoom and focus functions of the visible camera lens will be disabled until the camera operates within the specified temperature range.</p>
8	Camera may be operating in an environment where ambient temperature is above specification of the camera.	<p>1. Verify that the ambient temperature is not above +65 °C (+149 °F).</p> <p>2. Review the diagnostic log of the camera (accessible from the Service menu) for errors related to the operation of the internal fan.</p> <p>3. Add the optional sunshield accessory to reduce internal heating caused by sun loading.</p>
9	Camera has been subjected to high shock. Mechanical damage to the camera may exist.	<p>1. Verify the integrity of the mechanical parts such as the arms and the pan body.</p> <p>2. Verify the integrity/tightness of the external fasteners. Tighten where necessary.</p> <p>3. If obvious damage is present, stop using the camera and contact the nearest Bosch Security Systems Service Center.</p> <p>4. If no damage is evident, power the camera off and then on, and then evaluate operational performance. If the camera does not operate as expected, contact the nearest Bosch Security Systems Service Center.</p>
10	Camera is detecting high humidity level inside housing. The integrity of the housing seal may be compromised.	<p>1. Inspect the window for any cracks or obvious damage around the edge of the window.</p> <p>2. Verify the integrity/tightness of the external fasteners. Tighten where necessary.</p> <p>3. Verify the integrity of the mechanical seals around the tilt head, pan body, and arm joints.</p> <p>4. If damage to the seals is obvious, contact the nearest Bosch Security Systems Service Center.</p> <p>5. If no obvious damage is found, power the camera off and then on. If the status code reappears, contact the nearest Bosch Security Systems Service Center.</p>

Status Code	Description	Recommended action (to be completed by a qualified Service Technician)
11	Wiper operation has been halted because of an obstruction.	<ol style="list-style-type: none"> 1. Remove any obvious materials that are obstructing operation of the wiper. 2. If the obstruction is from ice buildup, review the diagnostic log of the camera (accessible from the Service menu) for errors related to operation of the internal heaters (and the window defrosters, for MIC IP fusion 9000i). If possible, tilt the camera so that the front faceplate is pointed straight up. (In this position, heat generated by the camera will help to melt ice buildup from its front faceplate area.) 3. If the obstruction is from extreme ice buildup, temporarily avoid operating the wiper until internal heaters, combined with a rise in ambient temperature, melt the ice buildup.
12	Left and Right Pan Limits have been set too close to each other.	Re-configure one camera stop limit or the other to increase the distance between limit stops to at least 10° apart.
13**	Autofocus has been turned off because of excessive focus activity.	<ol style="list-style-type: none"> 1. If practical, increase lighting in the scene so that the focus function stops “hunting.” 2. Use focus in manual mode or One-Push mode.
14**	Washer operation was attempted without washer pre-position being stored.	Configure the washer pre-position. If necessary, refer to the subchapter “Using the Wiper/Washer (Bosch AUX/Pre-position Commands)” in the User Manual for details on configuring washer functions.
15	Attempt was made to move to a pre-position that is mapped to an alternate function, so it is no longer associated with a location.	<ol style="list-style-type: none"> 1. Select/configure a different pre-position number for the desired location. 2. Re-configure the pre-position assignment so that this number is no longer associated with an alternate function. Refer to the subchapter “Pre-position mapping” in the User Manual for details on re-mapping pre-positions.
16**	Motorized zoom function is programmed to operate at a high usage level in the Playback Tour. This high rate of usage could result in premature wear of the zoom motor.	Re-configure the camera to decrease the zoom activity to less than 30% during recording.

Status Code	Description	Recommended action (to be completed by a qualified Service Technician)
17	Motor operation has been halted due to an obstruction.	<ol style="list-style-type: none"> 1. Remove any obvious materials that are obstructing operation of the camera pan/tilt function. 2. If the obstruction is from ice buildup, review the diagnostic log of the camera (accessible from the Service menu) for errors related to the operation of the internal heaters (and the window defrosters, for MIC IP fusion 9000i). If the log notes heater or defroster failure, contact the nearest Bosch Security Systems Service Center. 3. If operation is obstructed because of excessive ice buildup, temporarily avoid operating the pan/tilt functions of the camera until internal heaters, combined with a rise in ambient temperature, melt the ice buildup.
18**	When operating using redundant power sources, the camera has detected a loss of power from the external High PoE power source.	<ol style="list-style-type: none"> 1. Verify the operating status of the external High PoE power source. 2. Verify the integrity of the electrical connections between the power source and the camera.
19**	When operating using redundant power sources, the camera has detected a loss of power from the external 24 VAC power source.	<ol style="list-style-type: none"> 1. Verify the operating status of the external 24 VAC power source. 2. Verify the integrity of the electrical connections between the power source and the camera.
20	Camera is configured to use the “Hard Pan Limits” (HPL) feature, and it has been powered-up with pan position in the forbidden zone.	<p>Temporarily remove one of the hard pan limits (as described in PTZ Settings), pan the camera out of the forbidden zone, and then restore the hard pan limit.</p> <p>Reboot the camera by powering the camera off and then on, or by clicking the button Reboot in the camera’s web browser (Configuration > Camera > Installer Menu >Reboot device).</p> <p>Note: If pan movement is blocked only in one direction, but possible in the other direction (as when the camera is near the HPL), then no status code appears.</p>
21	Illuminator error: IR	<p>Reboot the camera by powering the camera off and then on, or by clicking the button Reboot in the camera’s web browser (Configuration > Camera > Installer Menu >Reboot device).</p>

		<p>If this action does not resolve the problem, contact the nearest Bosch Security Systems Service Center. The Service Center may request information from the diagnostics log of the camera (accessible from the Service menu).</p>
<p>23</p>	<p>An internal error has occurred. (The optical video screen becomes blue for 1 or 2 seconds during the camera’s recovery procedure.)</p>	<p>If this problem begins to occur on a regular basis:</p> <ol style="list-style-type: none"> 1. Verify that the power source to the camera is not experiencing brown-out conditions. 2. Verify that the camera’s earth ground connection is attached per earlier instructions. <p>If these actions do not resolve this problem, contact the nearest Bosch Security Systems Service Center.</p>

Caution!

If you choose not to use a switch or midspan with the appropriate Power Sourcing Equipment (PSE) chip, then the MIC camera will not recognize the PoE as compliant, and the camera firmware may disable some or all functionality.
