1 Document history

This document is valid for all ONVIF Camera Event Driver Tool versions. Only the release notes of the latest version are fully updated and would contain updates for earlier versions as well.

Date	Version	Changes
2023-12-11	ONVIF Camera Event Driver Tool	Initial version for ONVIF Camera Event Driver Tool 2.1.1.4

2 ONVIF Camera Event Driver Tool 2.1.1.4

2.1 Introduction

The main purpose of the ONVIF Camera Event Driver Tool is to receive 3rd party events from the camera connected to the BVMS and to map those events into the BVMS format. This approach gives a high level of flexibility and allows assigning any events, that are relevant for the system - even in case of new or specific camera events.

Using the ONVIF Camera Event Driver Tool, the VSG (as BVMS component) will first receive messages from the 3rd party ONVIF cameras and then send the translated messages to the clients from VSG 8.0 onwards.

The latest version of the Release Notes is always available on the [Bosch Security Systems Product Catalog](#). ONVIF Camera Event Driver Tool 2.1.1.4 is tested and released with BVMS 11.1.1.

2.2 New functionality

Build	ID	Description
2.1.1.4	n.a.	n.a.

2.3 Resolved issues

Build	ID	Description
2.1.1.4	423501	(FIXED) Security fix in RCP+ SDK

2.4 Known issues

Known issues

Known issues are inherited by previous versions. If an issue is fixed, it will appear in the list of resolved issues. The issue IDs can be used to relate an issue to a resolution.

Build	ID	Description
2.1.1.4	n.a.	n.a.
