

The XLA 3200 line arrays,  
a revolutionary new angle  
on sound distribution...

Bosch Security Systems decided to take a different angle on line array loudspeakers. The result was a revolutionary new range: the XLA 3200 (eXtended Listening Area)

- A leap forward in installation ease
- Amazing acoustic performance
- Less speakers for better sound
- Ideal for more demanding applications
- A more attractive - and practical - design
- Voice Evacuation compliant as standard

**A leap forward in installation ease**

One of the most revolutionary aspects of the XLA 3200 range is its ease of installation. Two simple steps are enough:

1. Determine the mounting height using the supplied chart.
2. Mount the speaker at the angle marked on the mounting bracket.

And that's it! Installing line arrays has never been simpler.

# Line array loudspeakers with advanced acoustics for a larger listening area

**XLA 3200**  
Taking sound further

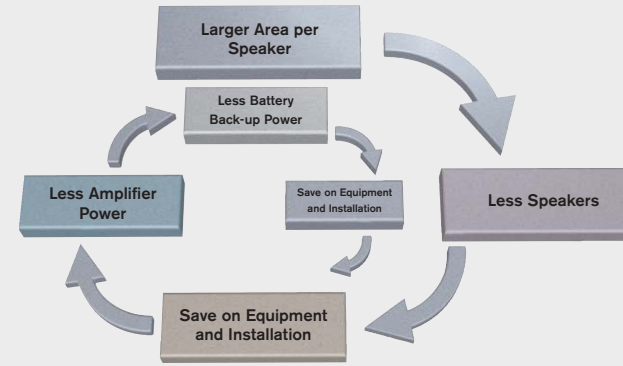

## Amazing Acoustic Performance

The XLA 3200 range also incorporates a unique technology angle. An ingenious new approach\* of positioning the loudspeaker drivers in the array, coupled with filtering techniques so each driver emits a dedicated frequency range, results in unique and advanced acoustical characteristics;

You notice the difference in **three** main ways:

- Remarkably clear, natural sound for excellent intelligibility of both speech and music.
- Greater coverage - reaching more people with perceptual perfect sound.
- And uniform sound distribution throughout the listening area: not too loud at the front, not too quiet at the back, and all relevant frequencies everywhere.

## Less Speakers for better sound

The high efficiency and eXtended Listening Area of the speakers means less are required to achieve the same sound volume in a given area. You save on equipment costs and installation time. And, as an added bonus, less amplifier power is required.

## Ideal for more demanding applications

Greater sound directivity - including suppression of acoustic side lobes - makes the XLA 3200 loudspeakers extremely well-suited for sound reproduction in rooms prone to reverberation. It also means the gain setting can be turned up much higher without any acoustic feedback.

## A more attractive - and practical - design

These loudspeakers, with their modern silver finish, create a sense of high technology and elegance. They are also more compact and less obtrusive than conventional column loudspeakers.

## More information?

For more information on how the revolutionary new XLA 3200 loudspeaker range can bring a whole new angle to your business, simply complete and return the attached reply card or visit our website.

- Yes, please send me more information on the XLA 3200 of Bosch Security Systems
